Interactive Drawing Ideas

1. Paintings

- There are one or multiple paintings, moving the mouse makes the picture inside the frame move

2. Bushes

- The screen is filled with bushes, and moving the mouse around moves some, revealing hidden ladybugs

3. The Moon

- Moving the mouse along the X axis cycles the moon through its various lunar phases

4. Stars

- The sky is filled with stars; hovering over them causes them to disappear
- The stars could be randomly generated

5. Cookie Monster

- Attached to the mouse is a cookie. Dragging the mouse over the monster's mouth will prompt him to open his mouth. He will close his mouth when the mouse is dragged away.

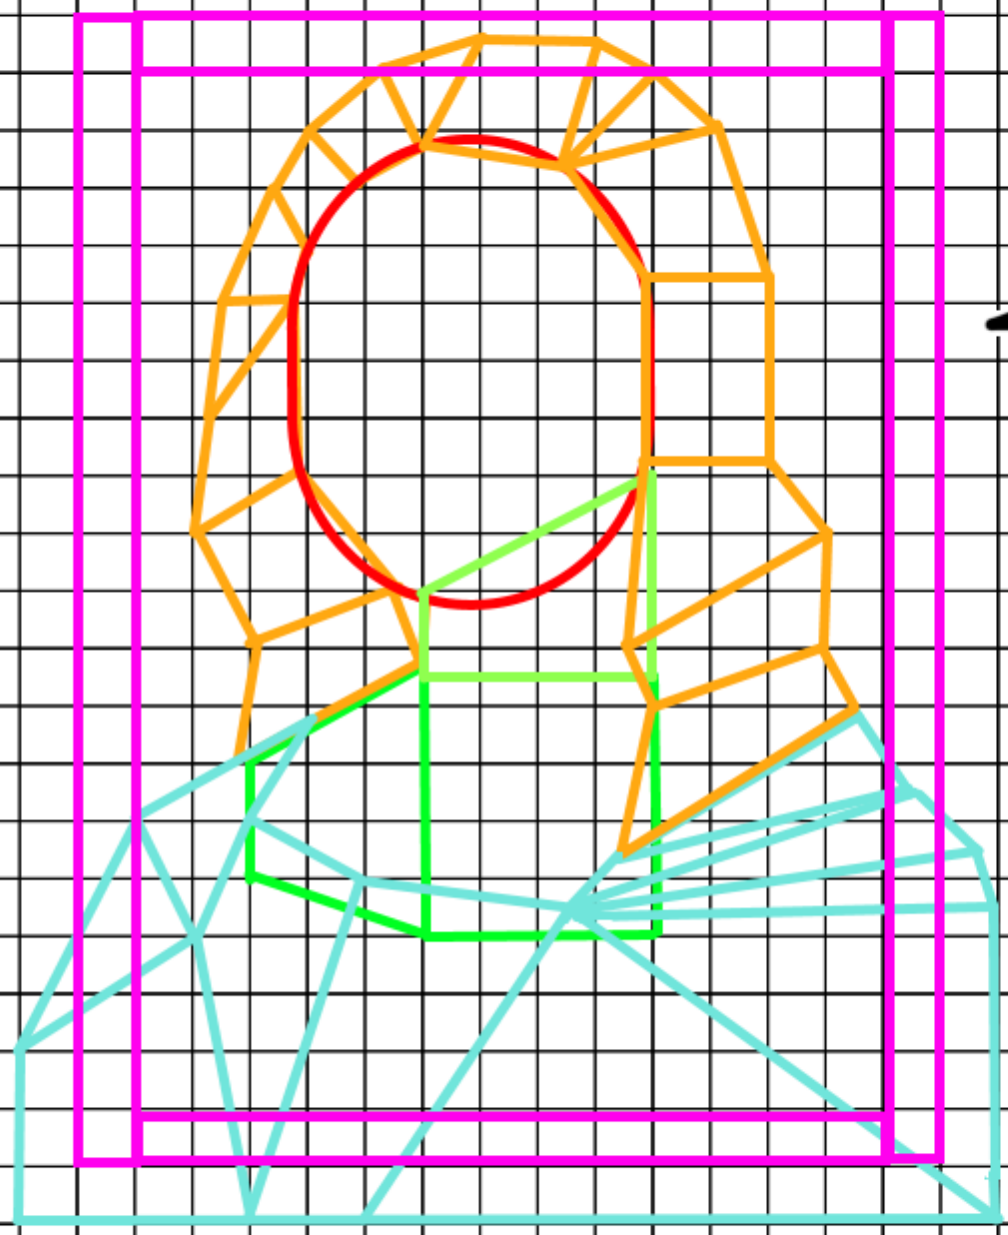
6. Sunset

- Moving the mouse in the Y axis raises and lowers the sun, changing the sunset colors
- Moving the mouse in the X axis brings in the overcast clouds to hide or show the beautiful sunset

Pixel Paper - 200 x 200

Graph Paper for Screen Coordinates

Shape blocking for the Mona Lisa (Roughly)



Purple is the painting frame

The picture itself overlaps the frame so it can be moved inside the frame.

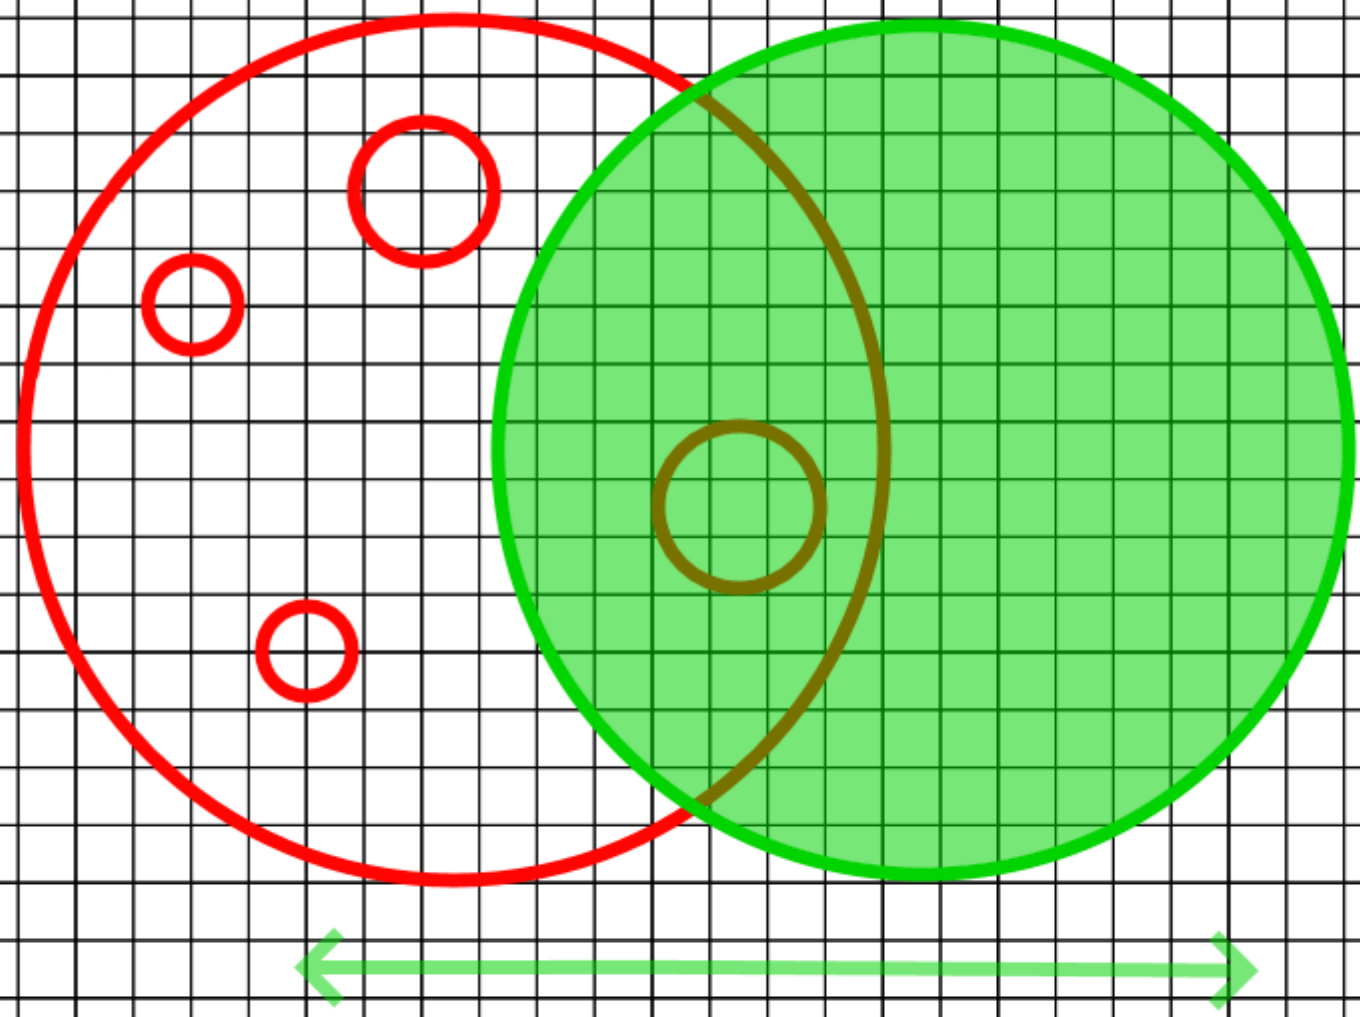
Sketch is on pixel paper grid!

Pixel Paper - 200 x 200 Graph Paper for Screen Coordinates

The Moon

---The-background-would-be-solid-back

- The green circle would be solid black as well
- Moving it over the moon would simulate the phases of the moon



Sketch is on pixel paper grid!

Colored

Mona Lisa

Sketch 1

Shape blocking

The picture would be larger than the frame. Moving the mouse would make it move around in the frame

Would be cool with multiple paintings...

Stars

Sketch 2

- When a mouse hovers over a star, it disappears. It would be cooler if it shot off like a shooting star!

- The sky and stars can move around when the mouse is panned
